

ECHO botanica® - Flowers and plants in transparent, environmentally-friendly wrapping!

A bouquet is always something very special, so what goes with it should not be humdrum. The thin, crisp and transparent ECHO botanica® is an extraordinary flower wrapping paper. Made from 100% natural materials, it not only reinforces the beauty of the flowers, but is also complementary to the natural product: flowers. ECHO® is made from 100% cellulose, with no chemical additives. Moreover, only sustainable raw materials are used in the manufacture. ECHO botanica® is compostable!

The flowers stay fresh!

ECHO botanica® is breatheable, so the flowers remain fresh longer, even when wrapped, because they get enough fresh air to breathe.

Also available in colours!

ECHO botanica® is available in various colours. According to season, we offer suitable shades. Yellow, red, and light green are just three examples in our range.

ECHO botanica® - floristry glassine
